DISEASE MODIFYING THERAPIES

- Wat is een disease modifying behandeling?
  1. Ziekteproces stoppen (of vertragen)

  2. Neuroprotectie
     (nog aanwezige neuronen beschermen)

  3. Reeds geleden schade herstellen
     (‘de klok terugdraaien’)

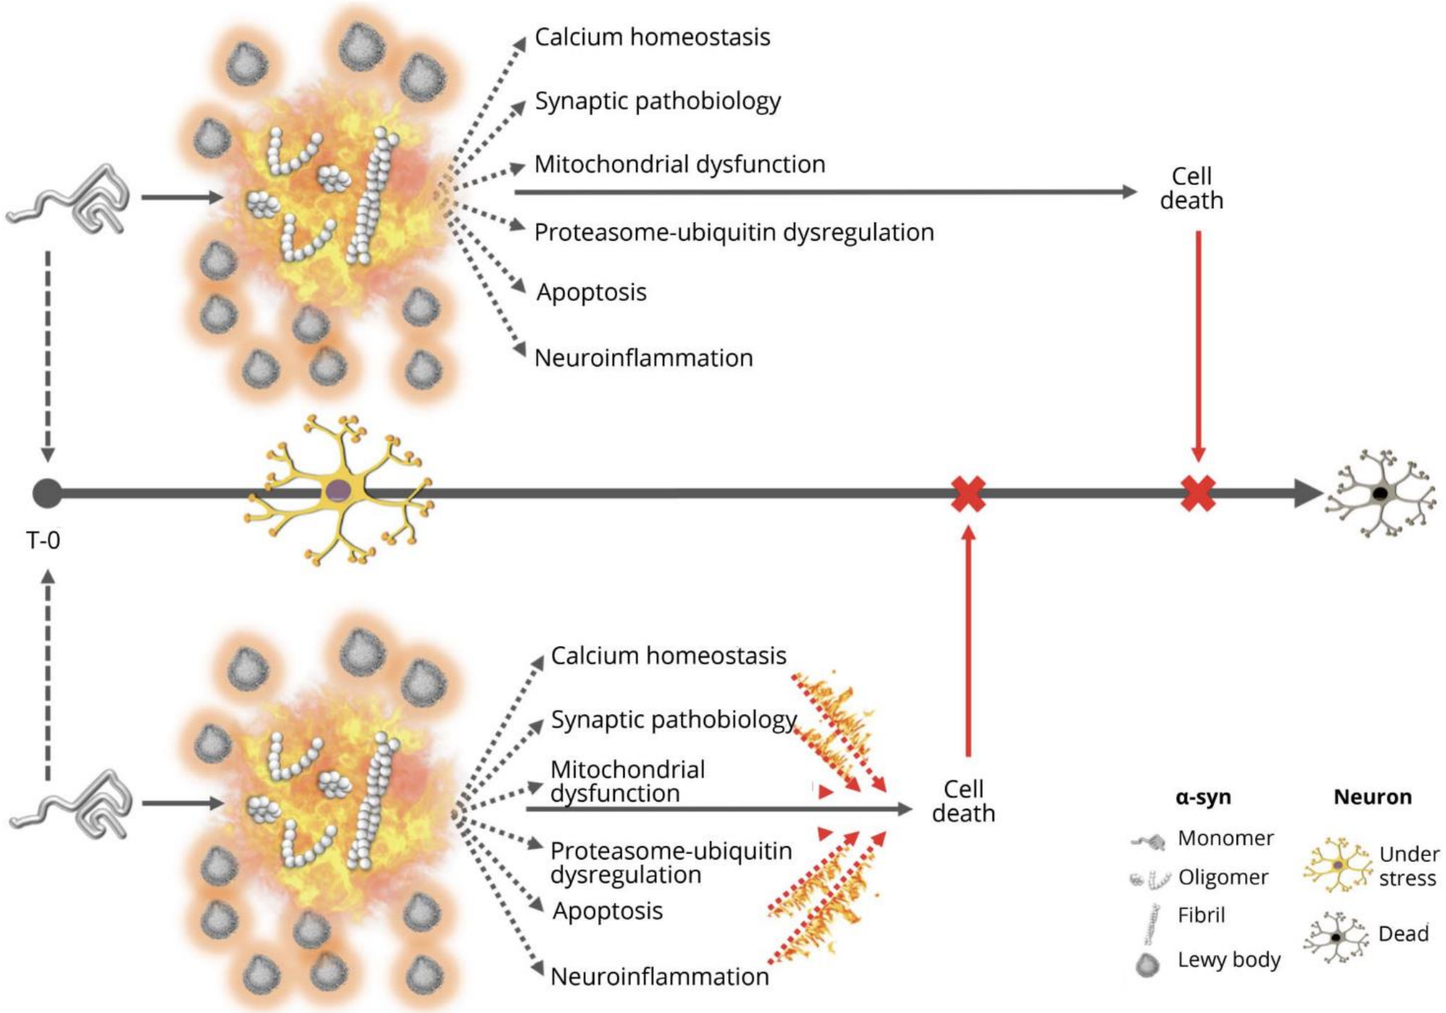
Lanabecestat, 2019 (2x)	BACE inhibitor	Mild AD	3	Y	No change (2/2)

AD: Alzheimer's disease. Aβ: beta-amyloid. NR: not reported. TE: target engagement.

PROTEIN AGGREGATION

Figure 2 Current model of protein aggregation in Parkinson disease (single disease model)



Abnormal soluble oligomers and fibrils of α-synuclein are directly pathogenic (upper panel). Alternatively or complementarily, secondary molecular changes created after protein aggregation combine with oligomers and fibrils to hasten cell death (lower panel). T-0 = time zero; α-syn = α-synuclein.

MEDICAL HYPOTHESIS

Revisiting protein aggregation as pathogenic in sporadic Parkinson and Alzheimer diseases

Alberto J. Espay, MD, MSc, Joaquin A. Vizcarra, MD, Luca Marsili, MD, PhD, Anthony E. Lang, MD, FRCPC, David K. Simon, MD, PhD, Aristide Merola, MD, PhD, Keith A. PROTEIN AGGREGATION

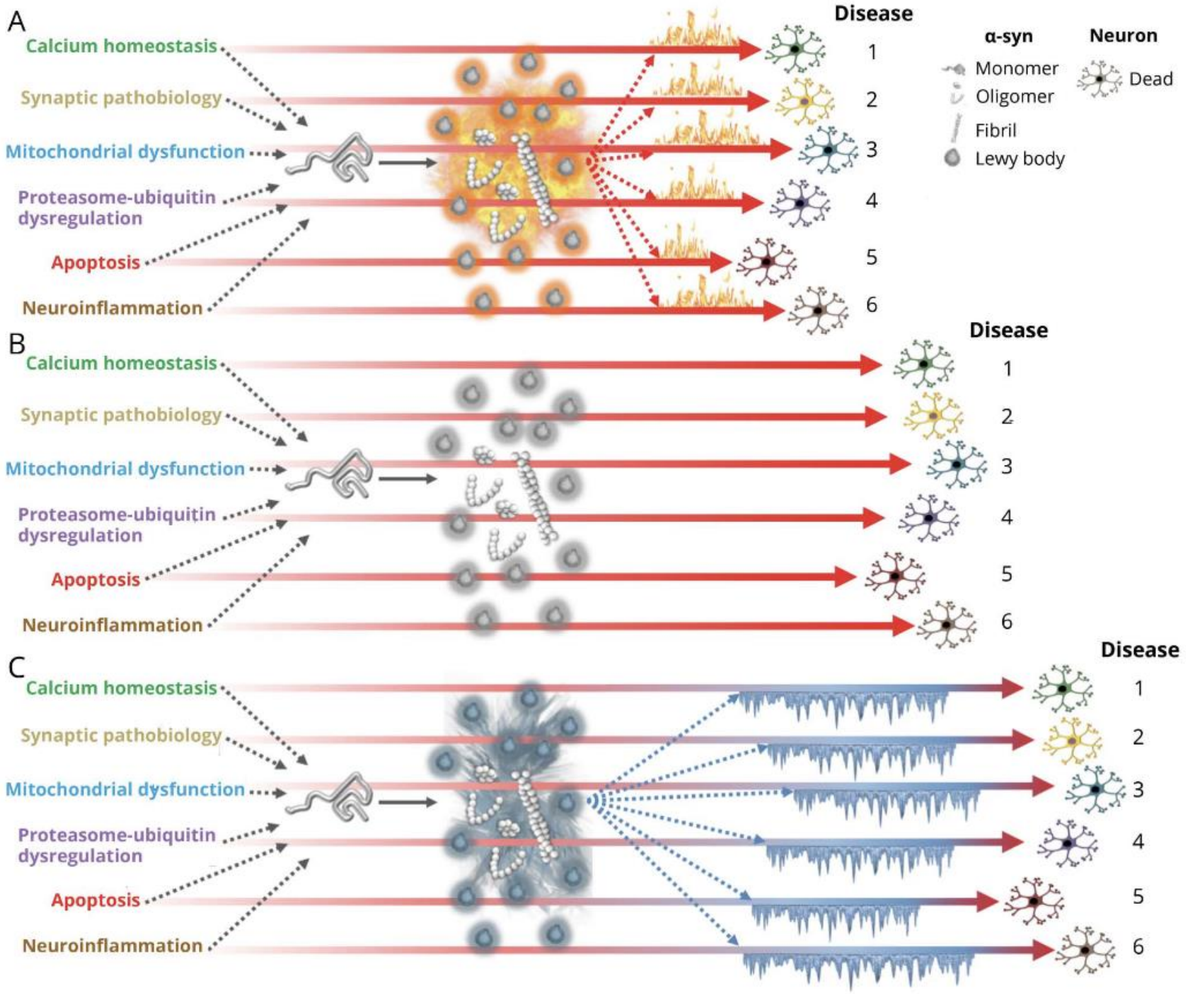
Figure 3 Alternative models of protein aggregation in Parkinson disease (multiple disease model)



Abnormal soluble oligomers and fibrils of α-synuclein (α-syn), while not directly pathogenic, act as accelerators of neurodegeneration ("fueling the fire") due to early pathogenic molecular abnormalities, each representing molecularly distinct diseases (A, model 1). Alternatively, abnormal soluble oligomers and fibrils of α-synuclein aggregate into Lewy bodies as byproducts of earlier pathogenic molecular mechanisms, without directly affecting the neurodegenerative process brought on by each molecular disease (B, model 2). Finally, α-synuclein aggregates into Lewy bodies as a mechanism to protect the neuron from toxic protein species or from the biological dysfunction that may have generated the formation of toxic species, "cooling" progression of cell degeneration under biological stress (C, model 3). Note that each molecularly defined disease has a different time to death; collectively, time to neuronal death is longest in diseases corresponding to model C.

UNIVERSITEIT GENT

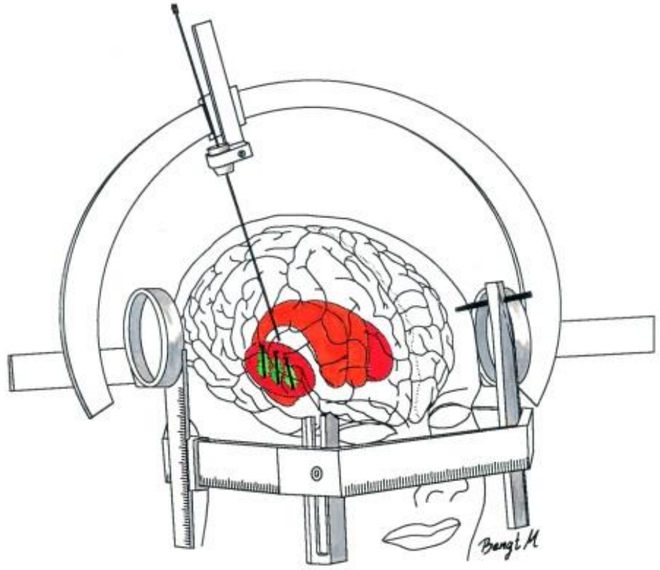
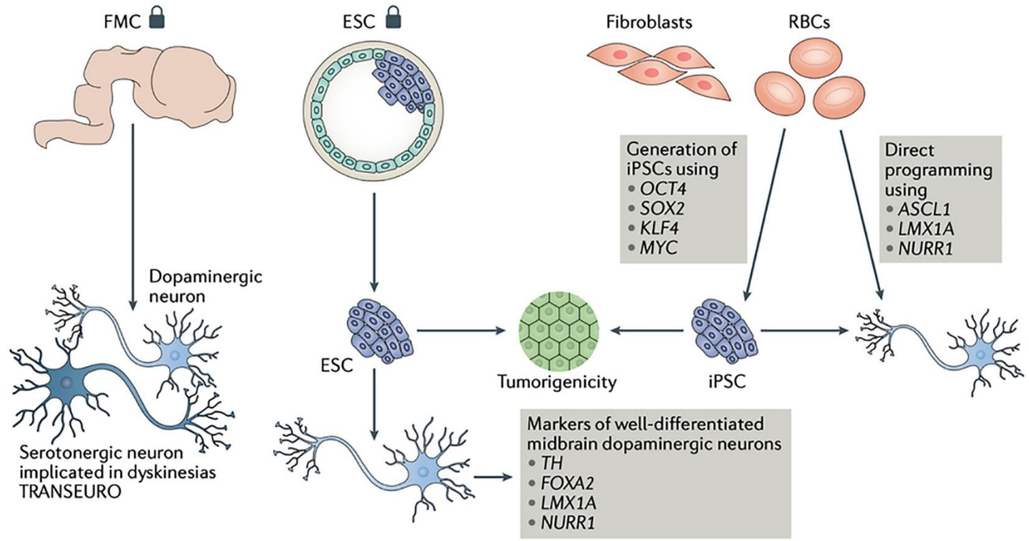
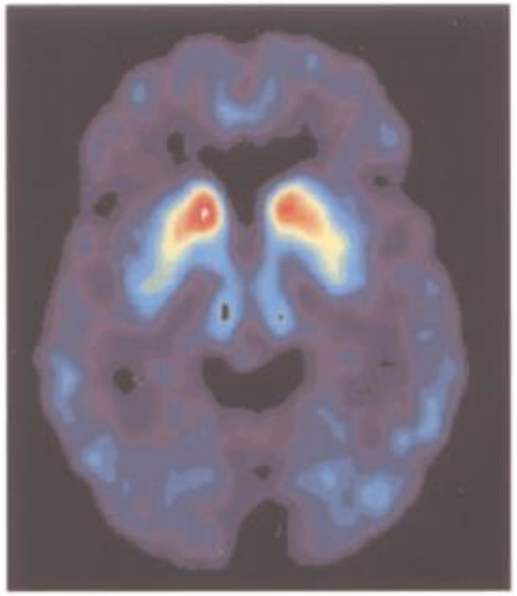
CEL TRANSPLANTATIE

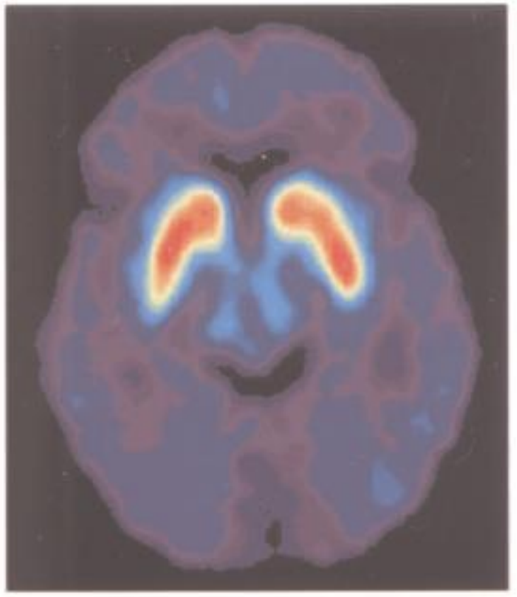
- TRANSEURO



- Kyoto cell transplantation trial
- China stem cell-based cell transplantation clinical trials







UNIVERSITEIT GENT

DISEASE MODIFYING THERAPIES

- Wat is een disease modifying behandeling?
  1. Ziekteproces stoppen (of vertragen)

  2. Neuroprotectie
     (nog aanwezige neuronen beschermen)

  3. Reeds geleden schade herstellen
     (‘de klok terugdraaien’)

UNIVERSITEIT GENT

VOEDING

- Retrospectieve studies: **mediterraan dieet** wordt geassocieerd met
  - lager risico op de ziekte van Parkinson (Alcalay et al., 2012)
  - oudere leeftijd bij diagnose (Metcalfe-Roach et al., 2021)
- Belang van vezels (SCFAs)

- Geen trials met dieet als behandeling in de ziekte van Parkinson

BEWEGING

RESEARCH ARTICLE OPEN ACCESS

Long-term Effect of Regular Physical Activity and Exercise Habits in Patients With Early Parkinson Disease

Kazuto Tsukita, MD, Haruhi Sakamaki-Tsukita, MD, and Ryosuke Takahashi, MD, PhD

Neurology® 2022;98:e859-e871. doi:10.1212/WNL.0000000000013218

Correspondence
Dr. Tsukita

REVIEWS

Long-term effects of exercise and physical therapy in people with Parkinson disease

Margaret K. Mak[1], Irene S. Wong-Yu[1], Xia Shen[2] and Chloe L. Chung[1]

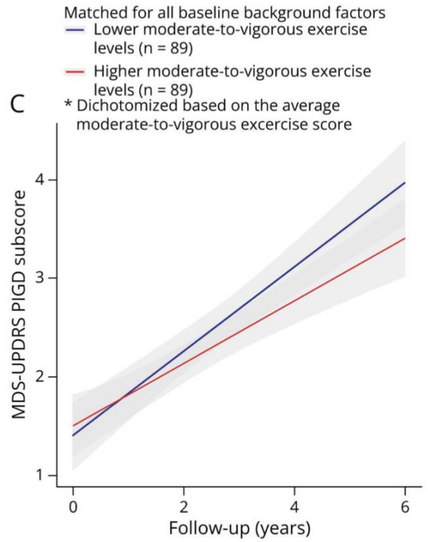
Research

JAMA Neurology | Original Investigation

Effect of High-Intensity Treadmill Exercise on Motor Symptoms in Patients With De Novo Parkinson Disease
A Phase 2 Randomized Clinical Trial

Margaret Schenkman, PhD, PT; Charity G. Moore, PhD; Wendy M. Kohrt, PhD; Deborah A. Hall, MD, PhD; Anthony DeLitto, PhD, PT; Cynthia L. Comella, MD; Deborah A. Josbeno, PT, PhD; Cory L. Christiansen, PhD, PT; Brian D. Berman, MD, MS; Benzi M. Kluger, MD; Edward L. Melanson, PhD; Samay Jain, MD; Julie A. Robichaud, BS-PT, MHS, PhD; Cynthia Poon, PhD; Daniel M. Corcos, PhD

- n = 237
- 5 jaar follow-up (observationele studie)
- **1-2x/week gedurende 1-2 uur** voldoende
- Geen associatie tussen baseline fysieke toestand en ziekte progressie = **nooit te laat om te starten**



EDITORIAL

Could Exercise Be the Answer?

Disease Modification With Long-term Regular Physical Activity in Parkinson Disease

Margaret K. Y. Mak, PhD, and Heidi Beck Schwarz, MD

Neurology® 2022;98:303-304. doi:10.1212/WNL.0000000000013208
