The "Interuniversity BOF projects" programme - iBOF

Interuniversity BOF projects (iBOF projects)

In implementation of Article 49/1 of the BOF decree, as approved by the Flemish Government on 3 May 2019, the Flemish universities are launching a call for interuniversity BOF projects (iBOF projects). Following this first call in 2019, an iBOF call will be launched every two years.

Concept
With iBOF funding excellent, frontier or blue sky research is supported that will be carried out in a consortium of at least 3 promoters from at least 2 Flemish universities. An iBOF project brings together top researchers (whether or not in combination with promising researchers with great potential) who, through such an interuniversity project, will (further) promote Flanders at an international level by deepening or broadening scientific knowledge and increasing capacity building in a sustainable partnership. The applying consortium must submit a concerted research proposal with a duration of 4 years, in which each promoter provides essential expertise for the realization of the proposal. At the same time, the promoters must be complementary to each other and/or mutually reinforcing as they need each other to be able to carry out the project in synergy. They may have worked together in the past, but this is not a requirement.

Proposals from all domains are possible, whether interdisciplinary or not.

Global budget and timing
For this first iBOF call, the BOF funds of 2019, 2020 and 2021 that were allocated to this call are merged. Therefore the overall budget will be at least € 30 million. After this first call, the call will be launched every two years, with an (indexed) budget of at least € 20 million per call.

Timing for this first iBOF call:
- September 2019: launch call
- 5 December 2019: deadline for submission of declarations of intent
- By 31 March 2020 at the latest: announcement of admission to the second selection phase
- 31 May 2020: deadline for submitting final applications
- June-August 2020: remote peer review
- Early September 2020: deadline rebuttals coordinator-spokespersons
- September or October 2020: presentation by the applying consortia to the international evaluation panel
- October-December 2020: interuniversity and university decision on the awarding of the projects
- 1 January 2021: start of iBOF projects
Who can apply for an iBOF project?

- The application must be submitted by a consortium of at least 3 promoters from at least 2 Flemish universities.
- Per promoter, one or more co-promoters affiliated with the same university as the promoter with whom they join, can participate.
- 1 of the promoters acts as coordinator-spokesperson for the consortium. The coordinator-spokesperson is primarily responsible for the good collaboration of the consortium and is the single point of contact. The coordinator-spokesperson also submits the final report on the project.
  In consultation with the promoters and co-promoters, the coordinator-spokesperson is responsible for the organization of an event for a wider scientific and/or societal target group. The cost of this event is included in the requested project budget.
- One can only be involved in 1 iBOF application.
- The promoters have an excellent track record or great potential. Excellence emanates from the complete track record and can be interpreted in different ways. Important elements are a publication profile at international top level, impact and a strong project portfolio. Per consortium one or more of the promoters have competitively acquired high-quality grants (such as ERC, Methusalem or Odysseus) and/or competitively acquired external funding of a high level and comparable magnitude for fundamental and/or strategic basic research (such as FWO-SBO and/or FWO-EOS) and/or play a leading role in European and/or comparable international cooperation projects.

The following applies to each of the promoters:
Promoters must - for the entire duration of the project:

- have either at least a 50% ZAP appointment at the Flemish university at which they apply for funding;
- or combine an appointment of at least 10% ZAP at a Flemish university (up to a total of at least 70% of a full-time equivalent) with a research mandate from the Research Foundation – Flanders (FWO) or with another research appointment at:
  - a Flemish academic hospital or;
  - a Flemish hospital with an academic character or;
  - a Flemish research centre (art. 2, 20° Decree concerning the organisation and financing of the science and innovation policy of 30 April 2009) or;
  - a recognized federal research institution or;
  - a Strategic Research Centre (SOC) or;
  - an academic education from a Flemish School of Arts or;
  - a foreign campus of the Flemish university where there is at least 10% ZAP appointment.
- or combine an appointment of at least 5% ZAP at a Flemish university with an appointment as clinical head or assistant clinical head or equivalent function at a Flemish academic hospital.

The following applies to each of the possible co-promoters:
Together with the promoter, the co-promoter makes a substantive contribution to the realization of the research project.
Co-promoters have a paid appointment at a Flemish university of at least 10% ZAP (at least 5% in the case of a combination with an appointment as a clinical head or assistant clinical head or an equivalent position in a Flemish Academic Hospital) and are still at least 1 year before retirement at the start of the project.

For the first iBOF call, there are no incompatibilities with current BOF and/or IOF projects, neither for the applying promoters nor for the applying co-promoters. Promoters and co-promoters who acquire
an iBOF project in the context of the iBOF call 2019 will not be able to participate in the next iBOF call 2021.

**The duration and scope of an iBOF project - financial provisions**

Duration: An iBOF project lasts 4 years.

Amount: The total amount that can be requested per promoter varies between 400,000 and 800,000 euros with a maximum of 3,000,000 euros per consortium. The requested budget is realistic and in accordance with the intended work packages.

Admissible costs: personnel costs, operational costs and equipment required for the approved iBOF project. No overhead is required.

Remaining funds at the end of the project can be used up to a maximum of 2 years, after that the funds are returned to the Special Research Fund (BOF).

**Procedure and submission data**

The call will be launched in September 2019.
The selection procedure consists of 2 phases.

1. **Interuniversity preselection of the declarations of intent (deadline 5 December 2019).**

   Deadline 5 December 2019: the coordinator-spokesperson submits the application in English to his/her university. The administrative offices of the Flemish universities are organized in such a way that all submitted declarations of intent are shared and accessible to everyone. The declarations of intent are administratively reviewed by the various Research Coordination Offices on points of formal admissibility.

   Information/documents to be submitted (please use the mandatory template for declaration of intent in attached to this call):
   - the composition of the consortium and a description of the expertise and complementary and/or mutually reinforcing contribution (or potential for convergence) of the promoters and any co-promoters in the project;
   - the English and Dutch title of the intended project;
   - at least 5 keywords;
   - a brief estimation of the budget;
   - a brief project description of 4 pages;
   - a motivation of why the proposal meets the concept of the iBOF call;
   - an English and Dutch non-confidential summary of the project (max. 10 lines each);
   - a brief bio-sketch of each promoter and co-promoter with an indication of the five most important achievements of each of them in the last 10 years and a link to the complete publication list as included in the university repository.

   Declarations of intent are binding with regard to the composition of the consortium: after the intention phase, promoters or co-promoters can no longer be added on the initiative of the applicants.

   By 16 December at the latest, all promoters will receive a message from the university of the coordinator-spokesperson about the formal admissibility of the application.
The Research Councils of each university are called in for an intra-university preselection and ranking of all applications in which the university participates. The Research Councils provide advice classifying the projects according to 1st priority, 2nd priority or not to be completed. Within each category the applications will be ranked. Next, an inter-university consultation takes place to reach a final preselection, taking into account the budgetary possibilities of each university. Each university provides at least the share required by the BOF decree in this interuniversity BOF call. The amount of projects that can be admitted to the next round equals about twice the budgetary possibilities of each university. The communication to the coordinator-spokespersons about admittance to the second round will be no later than 31 March 2020.

2. Selection of full proposals by an international panel (deadline 31 May 2020).
Deadline 31 May 2020: the coordinator-spokesperson submits the full application (in English) to his/her own university. The administrative offices of the Flemish universities are organized in such a way that all final applications are shared and accessible to everyone.

Information / documents to be submitted:

- A bio-sketch of each promoter and co-promoter with an indication of the five most important achievements of each of them in the last 10 years and a link to the complete publication list as included in the university repository.
- A description of the specific expertise, including the five most relevant achievements, of each promoter and co-promoter that will be involved in this project, indicating the complementarity between the different promoters and the added value of the collaboration.
- A description of the necessary equipment (i.e. existing infrastructure or the need for smaller equipment requested within the application of the project);  
- A detailed project description containing (on a maximum of 14 pages - always including references, diagrams and tables):
  o the state of the art in the research domain and references to literature;  
  o a clear hypothesis or question, the research objective(s) and a brief explanation of the international ground-breaking character;  
  o the description of the methodology and the work packages;  
  o a motivated budget including a breakdown per promoter;  
  o a schematic representation of the work packages with a clear division of tasks and a description of the organization of the collaboration;  
  o a description of the scientific added value of the project and the way in which it will give Flanders (even more) international appearance;  
  o a description of the intended impact of the results (of whatever nature).
- The completed ethics and privacy questionnaire.
- Declaration of agreement with the provisions of Articles 68 and 68/1 of the BOF decree.

The external review of the projects will be outsourced. The written remote reviewing of all applications will be received in the months of June to August 2020. All applicants are given the opportunity to write a rebuttal. Both the applications and the assessment reports of the external reviewers and the rebuttals are then submitted to a high-level international, interdisciplinary, gender-balanced ad hoc panel of experts which will conduct interviews with the applying consortia. The VLIR facilitates the operation of this panel and organizes the necessary meetings/interviews in September-October 2020. The panel provides a binding ranking of all applications and draws up a reasoned opinion based on the findings.
In October-November 2020, inter-university consultations will take place at the VLIR in order to make a final selection. The universities are hereby bound by the binding ranking of the panel and by their own budgetary possibilities.

Final advice is endorsed by the academic government within each university so that the projects can start from 1 January 2021.

Before projects really start, all necessary approvals from the ethics and/or privacy committee are submitted or planned. A data management plan (DMP) is expected within the first six months after the start of the project.

**Selection criteria**

The criteria for selecting the declarations of intent are:

- the formal eligibility criteria;
- the composition and quality of the applying consortium;
- the "fit" with the concept of the iBOF call.

The criteria for selecting the full applications are:

1. The scientific project (50%):
   - The exceptional scientific importance of the project and its excellence in pioneering/innovative aspects;
   - The quality of the hypothesis/research questions and the focus of the objectives;
   - The quality of the methodology and feasibility, but also the risk content.
2. The consortium (50%):
   - The international excellence as it appears from the track record of the applicants; the C.V., expertise and achievements. These depend on discipline and seniority and can, in addition to being purely scientific, also be very varied in nature (from top publications, to exceptional international visibility to strong valorization initiatives, striking outreach activities or other forms of strong impact). For promising applicants it is important that they can prove that they have the potential to do so;
   - The availability of the expertise of the promoters and co-promoters and the value of the contribution of each of them;
   - The degree of "concertedness" and the synergy between promoters and co-promoters.

**Cooperation agreement**

After awarding the projects, a cooperation agreement is concluded per project between all participating universities with a description of the cooperation modalities, including agreements on intellectual property.

**Reporting**

Before the end of the sixth month after the end of the project, the coordinator-spokesperson submits a final report to the home university on behalf of the promoters. The Research Coordination Offices ensure that these reports are distributed to all Flemish universities. The Research Council of each university evaluates the projects in which the university participated with at least 1 promoter. The overall final evaluation shows the average of the evaluations per university.

The reports follow the following format:
- Part I: scientific progress / results of the project;
- Part II: description of the scientific and other impact and the way in which the research created an international reputation.
