

Berekening chemische index

Targets

Parameter	Eenheid	Target
Opgeloste zuurstof	mg O ₂ L ⁻¹	≥ 9.5 (als T ≤ 20 °C) ≥ 6.0 (als T > 20 °C)
pH	-	6.5 – 9.0
Conductiviteit	µS cm ⁻¹	≤ 500
Totale stikstof	mg N L ⁻¹	≤ 1
Totale fosfor	mg P L ⁻¹	≤ 0.05

Formules

$$DO_i^{PTT} = \begin{cases} 100, DO_i \geq t^{DO} \\ 100 - 100 \times \frac{|t^{DO} - DO_i|}{t^{DO} - DO_{min}}, DO_i < t^{DO} \end{cases} \quad \text{met } DO_{min} = 0 \text{ mg L}^{-1} \quad (1)$$

$$EC_i^{PTT} = \begin{cases} 100, EC_i \leq t^{EC} \\ 100 - 100 \times \frac{|t^{EC} - EC_i|}{EC_{max} - t^{EC}}, EC_i > t^{EC} \end{cases} \quad \text{met } EC_{max} = 55.000 \text{ µS cm}^{-1} \quad (2)$$

$$PH_i^{PTT} = \begin{cases} 100, t_1^{PH} < PH_i < t_2^{PH} \\ 100 - 100 \times \frac{|t_1^{PH} - PH_i|}{t_1^{PH} - PH_{min}}, PH_i < t_1^{PH} \\ 100 - 100 \times \frac{PH_i - t_2^{PH}}{PH_{max} - t_2^{PH}}, PH_i > t_2^{PH} \end{cases} \quad \text{met } pH_{min} = 0 \text{ en } pH_{max} = 14 \quad (3)$$

$$P_i^{PTT} = \begin{cases} 100, P_{i,j} \leq t^P \\ 100 - 100 \times \frac{|t^P - P_i|}{P_{max} - t^P}, P_i > t^P \end{cases} \quad \text{met } P_{max} = 0.6 \text{ mg P L}^{-1} \quad (4)$$

$$N_i^{PTT} = \begin{cases} 100, N_i \leq t^N \\ 100 - 100 \times \frac{|t^N - N_i|}{N_{max} - t^N}, N_i > t^N \end{cases} \quad \text{met } N_{max} = 10 \text{ mg N L}^{-1} \quad (5)$$

Berekeningen

	Zuurstof (mg L ⁻¹)	Conductiviteit (µS cm ⁻¹)	pH (-)	Totale stikstof (mg L ⁻¹)	Totale fosfor (mg L ⁻¹)	Gemiddeld
